Overview

The Pepeverse is a family of Solana meme tokens, each tied to a Pepe character with its own X account, website and product. The characters share one ongoing graphic-novel story, told across their accounts, and every token's liquidity, burns and payouts are published with on-chain receipts.

\$CARNAGE is the newest token. It is the villain arc that follows the Brock incident: Pepe Kasady, a work-release inmate on the recovery crew, comes back changed. It launched on pump.fun on October 3, 2026 and graduated to PumpSwap the same night.

SNAPSHOT & VERIFICATION

Figures and on-chain status are project-reported as of the paper date, not independently audited here. Check the linked mint, burn receipts and lock contract. Market values and supply can change.

This paper covers the universe, the \$CARNAGE token, the supply and liquidity commitments behind it, and how to verify any Pepeverse contract address. The full Pepeverse paper (v2.3) is at pepeversehq.com/paper.

The Pepeverse universe

Seven tokens make up the universe today: five character tokens, \$CARNAGE, and \$JIANCO. Each character runs a product or a role in the story.

TOKEN	CHARACTER	X ACCOUNT	SITE	WHAT IT DOES
\$PEPARK	Pepe Parker	@PEPE_Parker_Sol	pepeparker.com	Flagship; membership key to the full scanner and holder rooms
\$CACKLE	Pepe Goblin	@PEPE_Goblin_Sol	pepegoblin.com	Opens plays and alerts on Pepe Scanner
\$OCTO	Octopepe	@Octopepe_sol	pepeoctavius.com	Pepeoctavius research app
\$PEPESCOBAR	Don Pepe Escobar	@rtc2028	pepeescobar.com	Drug Wars weekly game, SOL prizes paid on-chain
\$PEPENOM	Pepe Brock	@PEPEVERSEHQ_Sol	pepebrock.com	The first symbiote villain; Streamflow staking
\$CARNAGE	Pepe Kasady	@PEPEVERSEHQ_Sol	pumpcarnage.com	The second symbiote villain; this paper
\$JIANCO	Jianco	@Jiancoins	jiancoin.win	Paired with GLDx; creator fees reach holders as GLDx

Memeify (@rtc20211) is the sister lab with its own tokens (\$FUKYEAH, \$SIDEYE, \$MARTIAN) and its own Telegram. Official announcements and every new contract address come from @PEPEVERSEHQ_Sol.

\$CARNAGE token facts

\$CARNAGE has a fixed supply, no mint authority and no freeze authority; nobody can create new tokens or freeze a wallet.

CONTRACT ADDRESS	AVKpeeWaCku3Mni5THbY4bkBnMrPzAEnnQKtP3wPpump
CHAIN / STANDARD	Solana, Token-2022
ON-CHAIN NAME / TICKER	CARNAGE / CARNAGE (character: Pepe Kasady)
ORIGINAL SUPPLY	1,000,000,000
REPORTED SUPPLY	656,330,254 (after burns)
DECIMALS	6
MINT AUTHORITY	Revoked
FREEZE AUTHORITY	Revoked
METADATA UPDATE AUTHORITY	Revoked
LAUNCH	pump.fun, October 3, 2026; graduated to PumpSwap the same night
POOL	PumpSwap CARNAGE/SOL, BTKS1a21rbBqcX9cM5xYrAwsSp2UTu8YE8b2AzpH7WBK
CREATOR WALLET	wAJHdxiuV6BheYWptEA3BQYT8GAQiimmad48woEjuyX (the Pepeverse hero-characters creator wallet)
TRADING FEES	Set by pump.fun; the creator share is paid to the creator wallet
WEBSITE	pumpcarnage.com

There is no team allocation, vesting schedule or presale. Every token in circulation was bought on the bonding curve or in the pool.

\$CARNAGE supply and liquidity security

34.4% of the original supply is burned, and 99.8% of the pool's liquidity is either burned or locked until October 1, 2027.

SUPPLY

EVENT	CARNAGE	SHARE OF 1B	RECEIPT
Dev burn 1	199,627,907	20.0%	Solscan
Dev burn 2	99,813,953	10.0%	Solscan
Other burns (outside the dev wallet)	44,227,886	4.4%	Token supply on Solscan
Total burned	343,669,746	34.4%	

The dev's remaining 99.8M CARNAGE was not kept: it went into the pool with 29.7 SOL, and that liquidity is locked.

LIQUIDITY (PUMPSWAP CARNAGE/SOL)

LP POSITION	SHARE OF LP	STATUS	PROOF
Graduation LP	68.3%	Burned by pump.fun at graduation	RugCheck
Dev liquidity add (99.8M CARNAGE + 29.7 SOL)	31.5%	Locked on Streamflow until October 1, 2027, 05:00 UTC	Streamflow contract
Streamflow service fee	0.2%	Held by Streamflow	—

RugCheck lists the Streamflow lock under Lockers but counts only the burned 68.3% in its "LP locked" figure. Both positions are on-chain and can be checked at the links above.

Universe-wide commitments

Across the Pepeverse, the project reports \$307.7K of pool liquidity burned and \$100.1K locked as of October 3, 2026. These displayed components total approximately \$407.8K. Dated receipts are listed at pepeversehq.com.

- **Liquidity.** Available LP on the character tokens is locked for one year on StakePoint; \$PEPENOM's liquidity is burned on PumpSwap; \$CARNAGE's is burned or locked as shown above.
- **Supply.** The project targets about 20% of supply burned and 40-50% of value in liquidity. CARNAGE reports 34.4% burned. For other tokens' dated supply figures, see the main Pepeverse paper.
- **\$JIANCO treasury.** About \$12K of GLDx sits in the AhVn treasury wallet and funds weekly \$JIANCO buyback-and-burns, each posted with its receipt. \$JIANCO's own LP is locked in two Streamflow contracts, one unlocking December 31, 2026 and one in October 2027.
- **Staking.** Project funds held in staking are rewards for holders, not team funds.
- **Payouts.** Drug Wars prizes and community bounties are paid in SOL from the project wallet, with each transaction linked when announced.

Story and roadmap

\$CARNAGE carries the Pepeverse story past the Brock incident. After the first symbiote outbreak, a work-release crew went back in to clean up. One inmate, Pepe Kasady, never returned the same. Goblin finds a red filament in a recovery-crew camera case, Octopepe puts it under glass beside Brock's sample, Parker follows bootprints up a wall, and Escobar's freight lift keeps moving after every delivery is cancelled.

The illustrated story runs across the character accounts, beginning October 4, 2026, with chapters 1-11 collected at pumpcarnage.com.

Next for \$CARNAGE:

1. Release chapters 1–11 across the character accounts.
2. Apply for CoinGecko and CoinMarketCap listings once the token has trading history. Token info is already live on GeckoTerminal and DexScreener.
3. Add \$CARNAGE to the verified list at pepeversehq.com next to the other Pepeverse tokens.
4. Post every future burn, lock or payout from @PEPEVERSEHQ_Sol with its on-chain receipt.

Official channels and verification

A Pepeverse contract address is genuine only if @PEPEVERSEHQ_Sol posted it. Character accounts tag HQ rather than posting addresses, and the team never asks anyone for a wallet key or seed phrase.

To check a \$CARNAGE address:

1. Confirm it reads `AVKpeeWaCku3Mni5THbY4bkBnMrPzAEnnQKtP3wPpump`, ending in `pump`.
2. Confirm it matches the address in the @PEPEVERSEHQ_Sol launch post and on pumpcarnage.com.
3. Open it on [RugCheck](#) or [Solscan](#) and check that mint and freeze authority are revoked.

Risk disclosure

\$CARNAGE and the other Pepeverse tokens are meme tokens with no intrinsic value and no promise of returns. Prices can fall to zero quickly, and liquidity can be thin.

- Burns and locks reduce some risks; they do not stop holders from selling or the price from falling.
- The Streamflow LP lock ends on October 1, 2027. After that date the locked liquidity can be withdrawn by its recipient.
- Story content, products and roadmap items can change.

- Nothing in this paper is financial advice. Only spend what you can afford to lose, and verify every address yourself.
